

Data Center Relocation

Planning, Installation, Monitoring, and Support

Moving a data center can be a daunting task that requires detailed planning, project management and execution; all performed within a challenging timeframe. Vision Technologies provides turn-key solutions for physical data center relocations, whether the requirement is to move across campus, into a new cage, across the street or across the country. Whether the goal is to right-size, consolidate, compact, migrate to the cloud or simply move to a colocation space, Vision has the team to make it happen.

The hardest phase of relocating a data center is not the material handling during the physical move. A data center move is a project, with all the project phases: Initiating, Planning, Installation, Monitoring and Control, and Support. Often, the first executable phase is a pre-planning audit of the from and to locations, including asset inventory, connectivity mapping, fiber and copper labeling, logistics and point to point records. A Site Audit is a stand-alone service offered by Vision Technologies.

Relocation Services include but are not limited to:

- ▶ Pre-Project Customer Discovery/Consulting
- ▶ Audit of Existing Systems
- ▶ Design of New Location
- ▶ Floor (White Space) Raised Pre-Engineering & Customer Concept Acceptance
- ▶ Project Planning Phases & Project Timeline
 - > Critical Path Evaluation
 - > Risk Analysis
 - > Stakeholders
- ▶ Logistics Planning
- ▶ Tracing & Labeling of Existing Pathways & Connectivity
- ▶ Pre-Construction of New Location
- ▶ Physical Deconstruction
- ▶ Physical Transport
- ▶ Receiving & Material Handling
- ▶ Construction & Population of Components per Project Plan Phases
- ▶ Termination, Porting & Testing
- ▶ Document & Drawing Handover
- ▶ Customer Acceptance

Data Center Relocation

Providing a Seamless Migration Process

Vision Technologies has crews trained to prepare, pack and protect your valuable servers, storage devices and switches, as well as computer workstations, printers, fax machines, scanners and sensitive electronic equipment. We assist your IT staff, concentrating on your network system and infrastructure, while our technicians disassemble and pack all the equipment in your office. Our technicians will place each item in secure containers for transport, accompany them to their new location and upon final placement, properly reconnect all items and confirm that each unit is properly placed and in the same condition it left the previous office.

Project & Program Management from Inception to Completion

Vision Technologies is a single-source vendor, allowing all phases of the project to be handled by a seasoned Project Manager as a single point of contact, fortified with multi-layers of support from every discipline of the project delivery. Our team of professionals begins with a review of your IT infrastructure and your business units. While each project will have different requirements and priorities, a typical technical services engagement is performed as follows:

- ▶ A project manager will meet with your staff to thoroughly understand your priorities. Although the move itself might be divided into multiple stages, there may be incompatible or conflicting requirements for the blackout or downtime requirements of certain systems.
- ▶ Critical items and systems are identified for priority move status. These systems are identified as last off-line and first on-line. Once identified, dedicated resources are scheduled and assigned to assure that there are no delays.
- ▶ A comprehensive walk-through of your existing space focused on examining the office technology. We verify what is to be moved and identify and review any unusual requirements.
- ▶ Establish target timelines and milestones.
- ▶ Our project managers will prepare contingency plans in the event of schedule changes, weather impact, hardware failure, or system interruption. Our staff of certified network professionals is always available to the move team in the event additional technical resources are required.

Your business cannot afford downtime. Let Vision's team of professionals plan, coordinate and execute your move.

The Data Center Experience

Data center solutions built for the customer experience.

Integrated Technology Delivery

Enhance your project's ROI while delivering it faster!

Managed Services Center

Choose from our flexible suite of 24/7 support, maintenance & monitoring services.
