

In-Building Wireless Solutions For Hospitals

Vision Technologies has extensive past performance providing complete neutral-host, in-building wireless coverage by enabling seamless access to all wireless data and voice services within healthcare facilities. Our solutions feature the industry's leading converged wireless enterprise networks, providing high-quality and reliable coverage for wireless data (Wireless LAN), voice (PCS, LTE, cellular) converged voice and data (VoIP, 2.5G, 3G, 4G), paging, and two-way radio. *Don't let weak Wi-Fi disrupt your patient care.* Vision Technologies capabilities include survey, design, installation and carrier coordination.

Benefits of DAS:

- ▶ Provides seamless wireless indoor coverage
- ▶ Ensures first responders can communicate effectively
- ▶ Eliminates dead zones and spotty coverage
- ▶ Scalable for future capacity requirements

Challenge

Poor reception in hospitals and parking garages frustrates both patients and healthcare workers who need ubiquitous wireless coverage to connect with others in times of need or work effectively. Low-quality signals, dropped connections, and no coverage lead to disruptions in communication, hindering patient care and impacting medical personnel's efficiency. We understand the critical role seamless networks play in healthcare delivery.

Solution

Vision's converged wireless enterprise networks enable true seamless voice and data connectivity. A correctly installed in-building Distributed Antenna System (DAS) significantly improves communication where reception is weak or absent.

VISION TECHNOLOGIES

MAKING VISION REALITY

In-Building Wireless

Distributed Antenna Systems

Optimizing patented technology for the transport of RF signals over fiber optics, our solutions utilize a broadband hybrid fiber/coax infrastructure to distribute voice and data services to mobile users throughout a building or campus. Radio Frequency (RF) signals from mobile networks are transported over the infrastructure to broadband antennas.

Most importantly, with our broadband backbone network, new services or new wireless service providers can be added without any impact on existing service providers. Additionally, by consolidating hardware and installation costs, customers can greatly reduce their investment.

With expertise in both WLAN and cellular reinforcement, we are well positioned to help our customers increase productivity and take advantage of the latest wireless technologies for mission-critical applications.

Our distributed antenna systems feature a “Wire it Once” backbone architecture. This innovative infrastructure provides virtually unlimited service upgrades, as well as additions of future services without the need to install new cabling or antennas — all on a single distributed antenna system.

Vision Technologies also has iBwave certified designers and architects, as well as industry OEM certified engineers on staff.

A SEAMLESS FIT FOR ANY BUILDING

- ▶ Corporate Offices and Campuses
- ▶ Hospitals/Healthcare Facilities
- ▶ Airports
- ▶ Universities
- ▶ Multi-Tenant, High-Rise Office Buildings
- ▶ Hotels & Casinos
- ▶ Stadiums/Sports Venues
- ▶ Local & Federal Office Buildings
